Unit 35: Professional Engineering Management

Unit code L/615/1503
Unit type Core
Unit level 5
Credit value 15

Introduction

Engineers are professionals who can design, develop, manufacture, construct, operate and maintain the physical infrastructure and content of the world we live in. They do this by using their academic knowledge and practical experience, in a safe, effective and sustainable manner, even when faced with a high degree of technical complexity.

The aim of this unit is to continue building up on the knowledge gained in Unit 4: Managing a Professional Engineering Project, to provide students with the professional standards for engineers and to guide them on how to develop the range of employability skills needed by professional engineers.

Among the topics included in this unit are: engineering strategy and services delivery planning, the role of sustainability, Total Quality Management (TQM), engineering management tools, managing people and becoming a professional engineer.

On successful completion of this unit students will be able to construct a coherent engineering services delivery plan to meet the requirements of a sector-specific organisation or business. They will display personal commitment to professional standards and obligations to society, the engineering profession and the environment.

This unit is assessed by a Pearson-set assignment. The project brief will be set by the centre, based on a theme provided by Pearson (this will change annually). The theme and chosen project within the theme will enable students to explore and examine a relevant and current topical aspect of professional engineering.

*Please refer to the accompanying Pearson-set Assignment Guide and the Theme Release document for further support and guidance on the delivery of the Pearson-set unit.*
Learning Outcomes

By the end of this unit students will be able to:

1. Evaluate the risk evaluation theories and practices associated with the management of projects for the production of current and developing technology.

2. Produce an engineering services delivery plan that meets the requirements of a sector-specific organisation.

3. Develop effective leadership, individual and group communication skills.

4. Develop personal commitment to professional standards and obligations to society, the engineering profession and the environment.
Essential Content

LO1  **Evaluate the risk evaluation theories and practices associated with the management of projects for the production of current and developing technology**

The engineering business environment:
Organisational structures and functional elements
Strategic planning and deployment
Engineering strategy and services delivery planning
The role of sustainability
Total Quality Management (TQM)
Logistics and supply chain management
New product development strategies
Legal obligations and corporate responsibility

**Engineering relationships:**
The relationship between engineering and financial management, marketing, purchasing, quality assurance and public relations

LO2  **Produce an engineering services delivery plan that meets the requirements of a sector-specific organisation**

**Engineering management tools:**
Problem analysis and decision-making, risk management, change management, performance management, product and process improvement, project management and earned value analysis

LO3  **Develop effective leadership, individual and group communication skills**

**Managing people:**
Describe the most effective leadership styles
Techniques to effectively manage teams
Steps to follow for delivering effective presentations.

Meeting management skills
Communication and listening skills
Negotiating skills
Human error evaluation
Coaching and mentoring

LO4 Develop personal commitment to professional standards and obligations to society, the engineering profession and the environment

Becoming a professional engineer:

Engineering social responsibility
Importance of being active and up to date with the engineering profession, new developments and discoveries
Methods of Continuing Professional Development (CPD)
### Learning Outcomes and Assessment Criteria

<table>
<thead>
<tr>
<th></th>
<th>Pass</th>
<th>Merit</th>
<th>Distinction</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>LO1</strong></td>
<td><strong>P1</strong> Evaluate the risk evaluation theories and practices associated with the management of engineering projects</td>
<td><strong>M1</strong> Critically evaluate the main elements and issues that impact the successful management of engineering activities</td>
<td><strong>D1</strong> Specify and analyse the challenges encountered when meeting the requirements for successfully managing engineering activities, and make justified recommendations to overcome these challenges</td>
</tr>
<tr>
<td></td>
<td><strong>P2</strong> Assess elements and issues that impact the successful management of engineering activities</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>LO2</strong></td>
<td><strong>P3</strong> Develop an engineering services delivery plan, applying the appropriate sector-specific requirements</td>
<td><strong>M2</strong> Evaluate how each step of the delivery plan developed meets the requirements of a sector-specific organisation</td>
<td><strong>D2</strong> Critically evaluate contingencies that might prevent the delivery plan meeting the requirements of a sector-specific organisation</td>
</tr>
<tr>
<td></td>
<td><strong>P4</strong> Determine the engineering management tools needed for designing an engineering services delivery plan</td>
<td></td>
<td></td>
</tr>
<tr>
<td><strong>LO3</strong></td>
<td><strong>P6</strong> Describe the steps for effective persuasion and negotiation</td>
<td><strong>M3</strong> Evaluate leadership styles and effective communication skills using specific examples in an organisational context</td>
<td><strong>D3</strong> Critically evaluate effective ways for the coaching and mentoring of disillusioned colleagues or of a poorly performing team</td>
</tr>
<tr>
<td></td>
<td><strong>P7</strong> Explain the steps for managing effective group meetings</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td><strong>P8</strong> Outline the steps to deliver an effective presentation</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Pass</td>
